Fair Market Rent Calculation Methodology

[Show/Hide Methodology Narrative](#)

Fair Market Rents for metropolitan areas and non-metropolitan FMR areas are developed as follows:

1. 2014-2018 5-year American Community Survey (ACS) estimates of 2-bedroom adjusted standard quality gross rents calculated for each FMR area are used as the new basis for FY2021 provided the estimate is statistically reliable. For FY2021, the test for reliability is whether the margin of error for the estimate is less than 50% of the estimate itself and whether the ACS estimate is based on at least 100 survey cases. HUD does not receive the exact number of survey cases, but rather a categorical variable known as the count indicator indicating a range of cases. An estimate based on at least 100 cases corresponds to a count indicator of 4 or higher.

If an area does not have a reliable 2014-2018 5-year, HUD checks whether the area has had at least minimally reliable estimate in any of the past 3 years, or estimates that meet the 50% margin of error test described above. If so, the FY2021 base rent is the average of the inflated ACS estimates.

If an area has not had a minimally reliable estimate in the past 3 years, the estimate State for the area's corresponding metropolitan area (if applicable) or State non-metropolitan area is used as the basis for FY2021.

2. HUD calculates a recent mover adjustment factor by comparing a 2018 1-year 40th percentile recent mover 2-bedroom rent to the 2014-2018 5-year 40th percentile adjusted standard quality gross rent. If either the recent mover and non-recent mover rent estimates are not reliable, HUD uses the recent mover adjustment for a larger geography. For metropolitan areas, the order of geographies examined is: FMR Area, Entire Metropolitan Area (for Metropolitan Sub-Areas), State Metropolitan Portion, Entire State, and Entire US; for non-metropolitan areas, the order of geographies examined is: FMR Area, State Non-Metropolitan Portion, Entire State, and Entire US. The recent mover adjustment factor is floored at one.
3. HUD calculates the appropriate recent mover adjustment factor between the 5-year data and the 1-year data and applies this to the 5-year base rent estimate.
4. Rents are calculated as of 2019 using the relevant (regional or local) change in gross rent Consumer Price Index (CPI) from annual 2018 to annual 2019.
5. All estimates are then inflated from 2019 to FY2021 using a trend factor based on the forecast of gross rent changes through FY2021.
6. FY2021 FMRs are then compared to a State minimum rent, and any area whose preliminary FMR falls below this value is raised to the level of the State minimum.
7. FY2021 FMRs may not be less than 90% of FY2020 FMRs.

The results of the Fair Market Rent Step-by-Step Process

1. The following are the 2018 American Community Survey 5-year 2-Bedroom Adjusted Standard Quality Gross Rent estimate and margin of error for Island County, WA.

- The calculation of the relevant Recent-Mover Adjustment Factor for Island County, WA is as follows:

ACS ₂₀₁₈ 5-Year Area	ACS ₂₀₁₈ 5-Year 40th Percentile Adjusted Standard Quality Gross Rent	ACS ₂₀₁₈ 1-Year 40th Percentile Adjusted Standard Quality Recent-Mover Gross Rent
Washington Non-metropolitan	\$818	\$844

Portion – 2
